Credit Risk / Default Prediction

Enter customer information to estimate the probability of credit card default.

This is an educational machine-learning project and should not be used as a real lending decision system.

Customer Information

Credit Limit: 200000

Sex: Male

Age: 30

Education: 4 - Other

Marriage: 2 - Single

Repayment History

Values represent repayment status for recent months. Higher positive values generally indicate more serious delays.

PAY_0 - Most Recent Month: 0

PAY_2 - Previous Month: 0

PAY_3: 0

PAY_4: 0

PAY_5: 0

PAY_6: 0

Recent Bill Amounts

BILL_AMT1: 50000

BILL_AMT2: 50000

BILL_AMT3: 50000

BILL_AMT4: 50000

BILL_AMT5: 50000

BILL_AMT6: 50000

Recent Payment Amounts

PAY_AMT1: 10000

PAY_AMT2: 10000

PAY_AMT3: 10000

PAY_AMT4

10000

PAY_AMT5

10000
